

StaySync — Complete Build Prompt

v2.0

Real-Time Student Accommodation Platform

READ EVERYTHING BEFORE WRITING CODE. Build all pages, all routes, all socket events. No stubs. No placeholders.

1. PRODUCT IDENTITY

Name: StaySync

Tagline: Know Before You Go. Book Before It's Gone.

Type: Full-Stack Web App + Mobile PWA

Core Problem:

Students lose rooms due to lack of communication and tracking.

Core Solution:

Real-time color-coded bed availability system:

Green = Vacant

Yellow = Under Looking

Red = Occupied

2. TECH STACK

Frontend: HTML, CSS, Vanilla JS

Backend: Python + Flask + SocketIO

Database: SQLite

Storage: Local filesystem

3. CORE FEATURES

- Authentication (Student/Owner)
- Property Management
- Bed Status System
- Hold System
- Real-Time Updates
- Notifications
- Image Upload System

4. HOLD SYSTEM RULES

- Only green beds can be held
- Max 3 active holds per student
- Auto expiry system

- Owner can override hold

5. REAL-TIME SYSTEM

- SocketIO events for status updates
- Instant UI updates
- Reconnection handling

6. IMAGE SYSTEM

- Property, Floor, Room, Bed level images
- Upload, preview, delete

7. DASHBOARDS

Student:

- Browse, Hold, Track

Owner:

- Manage, Approve, Override

8. BUILD ORDER

Phase 1: Auth + Landing

Phase 2: Property + Bed System

Phase 3: Hold + Real-Time

Phase 4: Notifications + Polish

9. RULES

- No payments
- Offline agreements
- Real-time updates are mandatory
